SfilB: Psoroptes ovis is the infective agent causing sheep
scab, a serious dermatitis in sheep. The CDNA was
obtained from mites harvested from the skin of previously
unexposed sheep harbouring a moderate challenge
infection. The CDNA was cloned using the Clontech Lambda
TriplEx2 Smart cDNA cloning system."

/clone="Vector: Lambad TriplEX2; Site_1: SfilA; Site_2:
/filb; Psoroptes ovis is the infective agent causing sheep scab, a serious dermatitis in sheep. The cDNA was obtained from mites harvested from the skin of previously unexposed sheep harbouring a moderate challenge infection. The cDNA was choned using the Clontech Lambda TriplEx2 Smart cDNA cloning system."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Po_ad_01B12_TEXF1 Psoroptes ovis mixed Psoroptes ovis cDNA clone Po_ad_01B12_5' similar to CAB58493 SEQUENCE 5 FROW PATENT WO9424281. unidentified, mRNA sequence.

/inote="Vector: Lambda TriplEX2; Site_1: SfilA; Site_2:
SfilB; Psoroptes ovis is the infective agent causing sheep scab, a serious dermatitis in sheep. The cDNA was obtained from mites harvested from the skin of previously unexposed sheep harbouring a moderate challenge infection. The cDNA was cloned using the Clontech Lambda TriplEx2 Smart cDNA cloning system."

             /Glone libe "postoptes ovis mixed"
// Indee "Vector: Lambda TriphEX2; Site 1: SfilA, Site 2:
SfilB; Psoroptes ovis is the infective agent causing sheep scab, a serious dermatitis in sheep. The CDNA was obtained from mites harvested from the skin of previously unexposed sheep harbouring a moderate challenge infection. The CDNA was cloned using the Clontech Lambda TriplEX2 Smart CDNA cloning system."

H
Xhol; cDNA was prepared from polyA+ enriched RNA from effective root nodules harvested one month post inoculation with Sinorhizoblum meliloti. The cDNA was directionally ligated into the Uni-ZAP XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in XLOLR cells."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ŏ
                                    The invention relates to antiallergic compositions containing an antihistamine, a histamine synthesis inhibitor, and optionally an allergen or soluted mucleic acid molecule that has at least one polymucleotide sequence coding for the allergen, together with a pharmaceutical carrier. The pharmaceutical composition of the invention is useful as a nonspecific antiallergic treatment, and also useful in the treatment of allergic antiallergic treatment of allergic and atopical eczema. This polymucleotide sequence represents the DNA encoding a cysteine protease protein relating to the antiallergic compositions of the invention

```
composition (1) comprising a pharmaceutical carrier containing an active agent combination of at least two of: an allergen; an antihistamine; and a histamine synthesis inhibitor. (1) is used for treating or preventing allergic hypersensitivity reactions, especially allergic asthma, allergic hypersensitivity cactions, in babies, children or adults. The present sequence is the coding sequence for cysteine protease from Dermatophagoides pteronyssinus. The cysteine protease was used as an allergen in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
